

Job Growth in Mississippi January 2000 to May 2003

Background:

MDA report of job losses. The numbers provided by MDA, which show a gross loss of 44,897 jobs. These are based on WARN Notices from companies who plan a closure or lay off. These are incomplete, in that not every company that closes or lays off submits these forms. In addition, some companies who submit the forms to not end up eliminating jobs. Also, these numbers do not reflect any new jobs that have been created.

Bureau of Labor Statistics Data. The data used for the bullet points below is from the Bureau of Labor Statistics. This data is compiled by the MESC through a monthly survey of 4,000 employers out of approximately 60,00 statewide. These surveys have not included Nissan or any of its suppliers except one small one. This is the same process that is used all across the nation. While this data is not 100% accurate it is statistically significant. These numbers are net employment numbers and not gross. In addition, it appears that this is the same data that is being used by H.B.

Total Non-Farm Jobs in Mississippi

- From January of 2000 to May of 2003 there has been a decrease of 15,700 jobs.
- From January of 2002 (the lowest point during this time frame) till May of 2003 there has been a **17,400 increase** in total jobs.
